OUR UPCOMING PROJECT

Could AI help answer questions about hepatitis B?

We are investigating whether an AI chatbot could provide information about hepatitis B that is accurate, safe, clear and trustworthy.

Using health data to better understand disease and improve health outcomes.

Research shaped by data, technology and people.

WHO WE ARE

We are the Healthcare Data Science and Intelligence Lab (HDSci Lab), a research group at the University of Oxford.

WHAT WE RESEARCH

We use health records, data science and artificial intelligence (AI) to better understand diseases, particularly hepatitis B, to explore ways to improve healthcare.

HOW WE DO IT

We study patterns in existing healthcare records and investigate how new technologies could make reliable health information easier to access.

www.hdsci-lab.org

HELP SHAPE OUR RESEARCH

Research works better when patients and the public help shape it.

Join our Patient and Public Involvement (PPI) group to share your experiences, perspectives and ideas, and help guide our research.

No scientific or technical knowledge is needed – your experience is the expertise we need.
